The Vincent Shoe Fitter's Guide helps you find the right Vincent shoe size!

Measuring your child's shoe size at least every three months is important since babies and children grow between 2 to 4 shoe sizes a year, depending on age and each individual.

For best results, please:

- Fold or cut off the bottom of this page flush with the heel marking along the dotted line
- Use a hard surface and preferably with the heel against a wall or baseboard
- Measure the child's feet while standing up, with equal weight on both feet
- Gently press down on the foot and make sure the toes are not curled
- Make sure to measure **BOTH** feet and use the larger foot's measurement
- Choose the size listed for the first line past the longest toe

Sizing Pre-walker Shoes

For infants and pre-walkers, use the smaller pre-walker scale.

For buying Vincent pre-walker shoes as gifts, you might find following approximate guidelines to be helpful:

- Pre-walker 1 for age 2-5 months
- Pre-walker 2 for age 4-8 months
- Pre-walker 3 for age 7-11 months
- Pre-walker 4 for age 10-14 months

To verify that this page was printed without being scaled by your printer, use a ruler and measure the red line (left), which should be exactly 10 inches long.
